PART A: BACKGROUND INFORMATION

§1 ICE-Ireland project team

ICE-Ireland is the product of work by an international team of researchers, editorial assistants, and students. John M. Kirk initiated the project in 1990 and was soon joined by Jeffrey L. Kallen as ICE-Ireland co-director. In Cork, Goodith White and her colleagues, Francisco Gonzalvez Garcia and Ciaran Laffey, made early contributions to the developing corpus, while in Germany, Professor Hildegard Tristram and her associates, Irene Forsthoff and Marlies Lofing, helped with transcriptions of written texts. Tom Norton in London also made early transcriptions of broadcast material. Following the receipt of funding from the Royal Irish Academy and the British Council Social Sciences Committee in 1999, Mary Pat O'Malley was engaged in the editing of transcriptions. Major work in data collection, transcription, and editing was undertaken by Orla Lowry and Anne Rooney, Research Assistants funded by the Arts and Humanities Research Council (formerly Board) projects entitled 'Sociolinguistics of Standardisation of English in Ireland' (2001–03) and 'Integrating Prosody, Pragmatics and Syntax in a Corpus-based Linguistic Description of Irish Standard English' (2003–05). These projects also funded further editorial work on the corpus by Margaret Mannion and Esther Kallen in Dublin. Material for the ICE-Ireland corpus was collected by members of the project team and supplied by a range of students (mostly in Trinity College Dublin and Queen's University Belfast), volunteer speakers, authors, broadcasters, and publishers.

§2 Acknowledgments

Our first acknowledgment goes to the contributors of material to ICE-Ireland: students whose work has formed the basis for ICE-Ireland transcripts; speakers who were willingly recorded; recipients and authors of letters, documents, and other written material; and those publishers and broadcasting authorities by whose permission work appears in ICE-Ireland. In addition to the members of the ICE-Ireland team itself, we wish to acknowledge the help and support of colleagues in our own institutions, including John Thompson, Hugh Magennis, Ellen Douglas-Cowie, David Little, Eoin O'Dell, Breffni O'Rourke, and Lorna Carson. From the ICE project, we have benefited from the support shown to us by Sidney Greenbaum, Gerry Nelson, Sean Wallis, and Bas Aarts. Our efforts to collect appropriate materials have been greatly aided by Alex Elder, at the Northern Ireland Forum for Speech and Reconciliation; Noel Reagan of the Northern Ireland Legal Service; Barbara Durack in RTÉ; and Tom Dwan in the Houses of the Oireachtas. We are also indebted to David Robey.

Completion of the ICE-Ireland project would not have been possible without an initial seed grant from the Royal Irish Academy and the British Council Social Sciences Committee in 1999, and the substantial research grants from the Arts and Humanities Research Council (2001–03, 2003–05). These grants were aimed not simply at the production of corpora, but at the examination of larger sociolinguistic and linguistic questions for which the corpora provide essential data. As the list of ICE-Ireland publications in Section 6 shows, the results of these wider investigations are now bearing fruit and are expected to continue. It is a happy result, gratefully acknowledged here, that the ICE-Ireland and SPICE-Ireland projects have been made possible by the support which we have received to examine these research questions.

Complementary to the statement of copyright which appears below, the directors wish to thank the following for permission to include material in the ICE-Ireland corpus:

Ulster Television	Fortnight
BBC Northern Ireland	MBA Literary Agents
Queen's University Belfast	Radio Telefís Éireann
Blackstaff Press	The Houses of the Oireachtas
The Belfast Telegraph	The Irish News
The Sunday Life	The Irish Times
Ulster Tatler	A.M. Heath & Co. Ltd.

§3 Terms and conditions for the use of ICE-Ireland

ICE-Ireland is a transcribed corpus of speech and writing which is available for academic purposes only. By opening the ICE-Ireland CD-ROM, the user agrees to the following conditions: (1) not to use the corpus or any part thereof for commercial purposes, (2) not to make the corpus available to any third party without the prior permission of the ICE-Ireland research directors, and (3) not to alter the files contained in the corpus. The ICE-Ireland CD-ROM is available free of charge to bona fide academic users on submission of an application, though a charge for postage and packing may apply for mail-order requests. The ICE-Ireland corpus is not available online, nor are recordings for the spoken components of ICE-Ireland available.

Each copy of the ICE-Ireland corpus is given to a corpus user on a personal basis. Users of ICE-Ireland are allowed to install the corpus files *without any alterations to the text or format* onto their own computers. By accepting a copy of ICE-Ireland, the user agrees not to make the corpus available to any third parties, either in CD-ROM format or by access to a copy of ICE-Ireland which has been made onto a computer.

Arrangements can be made to use ICE-Ireland in educational institutions for teaching purposes. For further information, please consult the project directors or the project website at www.qub.ac.uk/ice-ireland.

All papers or theses which use ICE-Ireland material must give credit to the ICE-Ireland project for making the corpus available, and cite the ICE-Ireland corpus as appropriate. All uses of the ICE-Ireland corpus must be in accord with the copyright information included in Section 4 of this documentation.

§4 Copyright information

The compilation of materials known as ICE-Ireland version 1.2 is © 2007 Queen's University Belfast and Trinity College Dublin. Use of the compilation must comply with relevant copyright legislation, including that pertaining to the fair use of passages quoted with appropriate citation.

Copyright in the individual materials of ICE-Ireland remains with the copyright holder and this material may not be reproduced except in accordance with the law. While every effort has been made to obtain formal permission from all copyright holders, for some works which are publicly available, it has not been possible to contact all relevant copyright holders. The project directors apologise for any errors or omissions in obtaining formal permission and invite any information which will rectify any remaining oversights. The following list refers to copyright permissions for individual published works where specific acknowledgement is required as a condition of copyright release.

§5 The development of ICE-Ireland

The development of ICE-Ireland is best understood in relation to the International Corpus of English (ICE) project as a whole. The proposal to establish a machine-readable corpus of standard English from around the world, including both spoken and written language, was first put forward in a brief note by Greenbaum

(1988). As the ICE project became a reality, Greenbaum (1996b: 3) elaborated the aspirations of ICE as follows:

> its principle aim is to provide the resources for comparative studies of the English used in countries where it is either a majority first language (for example, Canada and Australia) or an official additional language (for example, India and Nigeria). In both language situations, English serves as a means of communication between those who live in these countries. The resources that ICE is providing for comparative studies are computer corpora, collections of samples of written and spoken English from each of the countries that are participating in the project.

After Greenbaum's initial proposal, the 1989 meeting of the International Conference on English Language Research on Computerized Corpora of Modern and Medieval English (ICAME) provided a focus for discussions on the feasibility of initiating ICE projects in Britain and Ireland. Preliminary consideration was given to the construction of separate ICE corpora (or subcorpora) for England, Scotland, Wales, and Ireland. This approach, however, did not materialise. Instead, the ICE-GB corpus was developed to cover Great Britain as a whole (see *ICE-GB* and Nelson, Wallis, and Aarts 2002), while John Kirk initiated a separate ICE-Ireland corpus in 1990. The project took on a wider geographical base with the subsequent addition of Jeffrey Kallen in Dublin as project co-director, and with the help of Goodith White, who was at that time in Cork. The first phase of data collection thus began in the early 1990s, with the accumulation of recordings made specially for ICE-Ireland or as student projects, and with the collection of written material. Though ICE-Ireland was far from completion in this first phase, decisions made by the management team during this time determined the ultimate shape of the corpus. Most notably, the decision to divide the corpus into equal portions from Northern Ireland and the Republic of Ireland reflected a concern with texts and their relation to the societies from which they come, overriding a more simple demographic consideration that would have assigned a significantly larger proportion of texts to the more populous Republic of Ireland. The North-South division of the corpus built into it the immediate potential for an examination of the relationship between political structures and standard language within a single identifiable language area, and remains one of the central features of the ICE-Ireland corpus (see further discussion in Kirk et al. 2003).

The importance of the North-South division in the ICE-Ireland corpus was recognised by the Royal Irish Academy and British Council Social Sciences Committee, who in 1999 provided funding to support a 'Network for cross-border research on the sociolinguistics of Standard English in Ireland' which comprised the ICE-Ireland research team. This grant made it possible to put an initial sample of Face to face conversations from the Republic of Ireland into machine-readable form, and to begin the compilation of results that would enable comparative studies of standard English in Ireland: the Irish material discussed by Kallen and Kirk (2001) comes from this preliminary sample. The cross-border and international comparative approach received major support from the Arts and Humanities Research Board in the UK in 2001. The grant from the AHRB to fund a two-year research project on the 'Sociolinguistics of Standardisation of English in Ireland' (B/RG/AN1033/APN12375) initiated a second phase of data collection. Since there were many gaps in the corpus from the first phase, and since the written material had yet to be converted into electronic form, much work remained to be done before ICE-Ireland could be used to test any hypotheses on the role of jurisdictional divisions in shaping standard English in Ireland. Since ICE in general is designed to reflect language use in the early years since its inception (1990–94), completion of ICE-Ireland during the time of the AHRB project emphasised the incorporation of recordings and written texts from those years. In certain categories for which archival material was not available (e.g. Telephone conversations), new recordings were made in 2002 and 2003. The development of ICE-Ireland thus took place over a period of approximately 14 years, and while the bulk of the texts in the corpus in most categories dates from the core ICE period, the

corpus as a whole reflects its long gestation period.

The completion of the collection of materials for ICE-Ireland did not mean the end of the research enterprise which gave rise to the corpus. On the corpus linguistics side, the AHRB provided further funding for a project entitled 'Integrating prosody, pragmatics and syntax in a corpus-based linguistic description of Irish standard English' (B/RG/AN1033/APN16248), which grew directly from the availability of ICE-Ireland. This project has given rise to the *SPICE-Ireland Corpus* (Kirk et al. 2005, 2007), which annotates the spoken texts of ICE-Ireland with prosodic, pragmatic, and discoursal information.

These corpora having been completed, the ICE directors are now engaged in the ongoing analysis of the data, continuing the cross-border comparisons of the original research proposals and extending this work into other areas. Publications and conference presentations related to ICE-Ireland are listed in Section 6.

§6 Publications related to ICE-Ireland

Members of the ICE-Ireland team have written and presented the following publications and conference presentations which are either about ICE-Ireland or which use significant amounts of data from ICE-Ireland. This list is complete to March 2008.

CD-ROMS

(2007) John M. Kirk, Jeffrey L. Kallen, Orla Lowry, Anne Rooney, and Margaret Mannion. *International Corpus of English: Ireland Component. The ICE-Ireland Corpus*: Version 1.2. Belfast: Queen's University Belfast and Dublin: Trinity College Dublin.

PART B: ICE-IRELAND

§7 Structure of the ICE-Ireland CD-ROM

The ICE-Ireland CD-ROM opens with a window which should look like Figure 1.

Name	Date Modified	Size	Kind
A 1 Copyright.doc	17 Dec 2006, 02:00	28 KB	Micr…ment
A 2 Licence.doc	17 Dec 2006, 02:00	24 KB	Micr…ment
A 3 Welcome to ICE-Ireland.doc	17 Dec 2006, 02:15	28 KB	Micr…ment
A 4 ICE-Ireland Table of contents.doc	17 Dec 2006, 03:05	32 KB	Micr…ment
ICE-Ireland doc	19 Dec 2006, 09:44	--	Folder
ICE-Ireland txt	17 Dec 2006, 02:01	--	Folder

Figure 1: ICE-Ireland main window

Following is a brief guide to the different elements which make up the CD-ROM.

Preliminaries

The first four elements are documents which should be read before attempting to use the corpus. The copyright and licence documents (which complement material found in this guide) are essential: anyone opening the ICE-Ireland CD-ROM is agreeing to the terms of the licence and to respect all copyright restrictions. These documents are as follows:

A1 Copyright Statement.doc

This is the copyright statement for ICE-Ireland. This statement should be read carefully in conjunction with the present volume, Section 4.

A2 Licence Agreement.doc

The licence terms for the use of ICE-Ireland are stated in this document, as they are in this guide. By opening the ICE-Ireland CD-ROM, the corpus user is accepting the ICE-Ireland conditions of use.

A3 Welcome to ICE-Ireland.doc

This document contains further information and contact details for the ICE-Ireland project.

A4 ICE-Ireland Table of contents.doc

The Table of contents gives an overall guide to the material in the CD-ROM.

Corpus folders

ICE-Ireland is found in two folders, **<ICE-Ireland doc>** and **<ICE-Ireland txt>.** The folders and text files found in **<ICE-Ireland doc>** are discussed here first. The **<ICE-Ireland txt>** folder is a replica of **<ICE-Ireland doc>** using .txt format for the relevant text files; it is discussed briefly following the explanation of **<ICE-Ireland doc>**.

<ICE-Ireland doc>

This folder opens to a window which should look like that in Figure 2. **<ICE-Ireland doc>** contains all the ICE-Ireland text files, in Microsoft Word .doc format. The content of each folder shown in Figure 2, together with its relevant sub-folders or text files, is discussed below.

Name	Date Modified	Size	Kind
All ICE files doc	15 Dec 2006, 08:32	--	Folder
ICE combined running doc	25 Jan 2007, 09:50	--	Folder
ICE spoken running doc	25 Jan 2007, 09:50	--	Folder
ICE spoken sorted doc	11 Dec 2006, 09:49	--	Folder
ICE written running doc	14 Dec 2006, 16:22	--	Folder
ICE written sorted doc	11 Dec 2006, 09:51	--	Folder

Figure 2: <ICE-Ireland doc> window

<All ICE files doc>

This folder contains seven folders, as shown in Figure 3.

Name	Date Modified	Size	Kind
All ICE all-files	17 Dec 2006, 03:08	--	Folder
All ICE CAT spoken	13 Dec 2006, 11:54	--	Folder
All ICE CAT written	14 Dec 2006, 16:11	--	Folder
ICE CAT spoken N	13 Dec 2006, 12:17	--	Folder
ICE CAT spoken S	13 Dec 2006, 12:17	--	Folder
ICE CAT written N	13 Dec 2006, 12:04	--	Folder
ICE CAT written S	14 Dec 2006, 16:12	--	Folder

Figure 3: <All ICE files doc> folders

The principle behind the files in the **<All ICE files doc>** folder is that they unite the individual ICE texts into larger units.
The nine files in the **<All ICE all-files>** each join individual ICE texts together into composite texts, as shown in Table 1. All composite texts present their individual component texts in alpha-numeric order. Within any given category, spoken texts precede written texts, and texts from Northern Ireland precede texts from the Republic of Ireland. Thus <All ICE all A> starts with text <S1A-001> (a spoken text from Northern Ireland), continues with all Northern Ireland spoken texts until reaching text <S2B-045>, and then begins with the presentation of texts from the Republic of Ireland, starting with text <S1A-046>. The same sequencing is then followed with the written texts, starting with <W1A-001>, from Northern Ireland, and concluding with <W2F-020> from the Republic of Ireland.

Folder	ICE-Ireland texts
<All ICE all A>	All 500 texts in one file
<All ICE all N>	All texts from Northern Ireland
<All ICE all S>	All texts from the Republic of Ireland
<All ICE all spoken A>	All 300 spoken texts in one file
<All ICE all spoken N>	All spoken texts from Northern Ireland
<All ICE all spoken S>	All spoken texts from the Republic of Ireland
<All ICE all written A>	All 200 written texts in one file
<All ICE all written N>	All written texts from Northern Ireland
<All ICE all written S>	All written texts from the Republic of Ireland

Table 1: Contents of <All ICE all files> folder

The remaining folders shown in Figure 3 are organised according to ICE text categories. These folders and their associated files are denoted with the label **<CAT>**. The **<CAT>** files consist of composite texts which join together all the ICE texts within a particular text-type category. Thus, for example, the **<All ICE CAT spoken>** folder contains one composite text for each ICE spoken text category, as shown in Figure 4. The **<All ICE CAT written>** folder contains one composite text for each ICE written text category, while the remaining **<CAT>** folders contain composite texts for the text type categories of the corpus from Northern Ireland (N) or the Republic of Ireland (S).

Name	Date Modified	Size	Kind

Figure 4: <All ICE CAT spoken> composite text files

Each text type category in the **<CAT>** folders is designated by a three-letter code, as shown in Table 2. For each text category, Table 2 also indicates the text-id numbers and includes approximate word counts (see also §12, p. 98).

It should be noted that the materials in ICE-Ireland differ in some instances from the materials which may be found in other ICE projects. Most notably, legal requirements in the Republic prohibit the recording of courtroom discourse, so the Republic of Ireland legal texts in ICE-Ireland come instead from testimony and presentations in legislative committee hearings. Most texts in the Examination essays category are not from timed examinations, but from student work – usually that of undergraduates – of various kinds. The Student essay category, in contrast, usually involves the work of postgraduate students. Within the category of Parliamentary debates, the Northern texts come from the Northern Ireland Forum for Peace and Reconciliation, which operated from 1994 to 1997 but was not an autonomous legislative chamber. These texts contrast with those from the lower legislative chamber in the Republic, Dáil Éireann.

Table 2: ICE-Ireland <CAT> files with word counts

<ICE combined running doc>

This folder contains each of the 500 ICE-Ireland texts in alpha-numeric running order according to text number. Each text has not only an identifying number patterned on the system established for ICE generally, but a brief identifying title (see Figure 6 for an example). In all categories, texts from Northern Ireland are numbered preceding texts from the Republic of Ireland. Unlike the <All ICE all A> text, however, the **<running>** folders present texts in strict alpha-numeric order, so that, for example, <S1A-046> follows <S1A-045> immediately.

<ICE spoken running doc>

This folder contains each of the 300 spoken texts in ICE-Ireland in running order according to text number.

<ICE spoken sorted doc>

This folder opens to show 15 folders, one for each category of spoken ICE text type, as seen in Figure 5. The text-type categories correspond to those used in other ICE projects, though there may be some minor differences between the wording of text-type labels in ICE-Ireland and that used elsewhere.

Figure 5: <ICE-Ireland spoken sorted doc> category folders

Each of the category folders is further subdivided into two folders, one for Northern Ireland texts, the other for texts from the Republic of Ireland. The category labels used for these folders may be abbreviated relative to the label as shown in Figure 5.

Within the folder for the respective N or S text type category, the relevant ICE-Ireland texts are listed in alpha-numeric order. Figure 6 shows a sample window; note the abbreviated folder name which appears in the frame of the window.

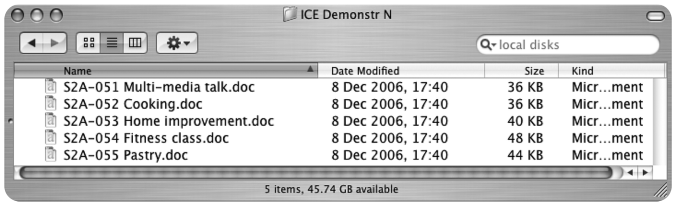

Figure 6: <ICE Demonstrations> Northern Ireland sub-folder

<ICE written running doc>

Parallel to the folder for spoken texts, this folder contains each of the 200 written texts of ICE-Ireland, in running order according to text number.

<ICE written sorted doc>

This folder contains 17 folders, each corresponding to a written text-type category. Each text-type folder is subdivided into an N and an S folder, each of which contains the individual texts that make up the category. The written text category folders are shown in Figure 7; as with the spoken text sorted folders, the category titles of the N and S sub-folders may be abbreviated.

Figure 7: <ICE-Ireland written sorted doc> category folders

<ICE-Ireland txt>

This folder is an exact replica of the **<ICE-Ireland doc>** folder. It is organised in the same way, and all the folder labels which include the notation **<txt>** correspond to the **<doc>** folder labels which are discussed above. Crucially, all the files within this folder are simply .txt format counterparts of the .doc files. What we anticipate is that users will find the .doc versions easier to read on screen and to print or access in other simple ways, while the .txt versions are much more compatible with the concordancers that operate on most computers. In a simple maxim, we suggest that 'the .doc versions are for you, the .txt versions are for your computer'.

§8 Transcription and mark-up in ICE-Ireland texts

As with all ICE projects, the transcriptions used in ICE-Ireland are orthographic. They do not include phonological information, although, as shown in the *Spelling and Lexical Entries* part of Section 9 below, some features of the spoken language such as auxiliary reduction and negative contraction which can be represented in conventional orthography are included in the ICE-Ireland texts. Intonation and other prosodic features are not included in ICE transcriptions, though the *SPICE-Ireland Corpus* (Kirk et al. 2007), which is based on the spoken texts of ICE-Ireland, does include detailed prosodic information for approximately 100 texts.

The major features of ICE transcription and markup are described by Nelson (1991a, 1991b, 1996); Nelson, Wallis, and Aarts (2002: 9–13); and the *ICE website* (*see* www.ucl.ac.uk/english-usage/ice/index.htm). Though ICE-GB is closely linked to the ICECUP software which is specially designed for ICE (*see* especially *ICE-GB* and Nelson, Wallis, and Aarts 2002: 69–231), ICE-Ireland is not linked to any particular concordancer or search method. The availability of ICE-Ireland in .doc and .txt format, together with the ready-made composite texts described above, offer what we take to be the optimum in availability for a wide range of users who may wish to use particular systems for searching the corpora.

ICE-Ireland has been transcribed and annotated in keeping with

the general principles of the ICE project. Certain modifications to ICE notation, however, have been made for reasons specific to ICE-Ireland, and these are described below. ICE-Ireland is not grammatically tagged and, compared to the tagging options allowed in the ICE protocols (see Nelson 1996), ICE-Ireland uses very little corpus annotation.

Text id. Each ICE-Ireland text begins with a **Text id**, consisting of the text number and the title of the text. The numbering system in ICE-Ireland follows that of ICE generally. The Text id is followed by a blank line, though this line is eliminated in the composite texts. Each continuous piece of transcription, known as a subtext, is initiated with the subtext marker <I>, and closed with the subtext termination symbol </I>. Most ICE-Ireland spoken texts consist of only one subtext, but some spoken texts and many of the written texts that contain short items such as business letters are composites of shorter subtexts. The subtexts are not numbered separately. For spoken material, a composite ICE-Ireland text is indicated in the title using a dash and two title elements, e.g. **<S1A-032 Art – Football>**. Though this practice is also followed for some written texts (such as **<W1B-013 Student – Friend>**), the extended use of composite texts in some text types leads to more general thematic titles, as with **<W1B-016 Belfast business 1>**.

Most of the spoken texts in ICE-Ireland come from much larger speech events (conversations, news broadcasts, etc.). In general, each text comes uniquely from a particular event, though on some occasions two texts have been transcribed from a single event. These texts are usually labelled to show this relationship, as in **<S1A-096 Sisters 1>** and **<S1A-097 Sisters 2>**, which come from the same conversation. For television and radio shows, the same title may be used several times in reference to different broadcasts, as with **<S2A-021 On the Edge 1>** and **<S2A-022 On the Edge 2>**.

Speaker id. After the Text id and initial subtext marker, each speaker turn in the transcription is indicated by a code which includes the text number and a **Speaker id**. The Speaker id is identified with the symbol **$** followed by a capital letter, as in $A, $B, $C, etc. In cases of doubt as to the identity of the speaker, the designation **$?** is used. The Speaker id is assigned according to the position of the speaker within each text. Thus a speaker may be the first speaker in one text and be identified as $A, but may be the third speaker in another text and be referred to as $C. For the spoken texts, cross-referencing in such cases can be found in the *Inventory of Spoken Texts and Speakers* (Section 10 below), where each speaker additionally receives a unique identifying number that is used across all texts. In the case of composite texts, the assignment of Speaker ids works continuously throughout the text as a whole, rather than starting again within each subtext. In the written texts, the Speaker id is found at the beginning of each subtext. The concept of Speaker id in the written texts, however, is not necessarily applicable in a personal sense: newspaper editorials, for example, are published anonymously and may be the product of one or many writers. In these cases, each Speaker id corresponds to a single piece of written text, not necessarily to a single author. To pick one example, **<W2E-007 Irish Times editorials>** contains four subtexts, each of which is given a separate Speaker id (thus $A, $B, $C, and $D). We cannot be sure, however, that these Speaker ids correspond to four actual individuals – it may be that one person has written all the editorials, or that many people have contributed to them. For such reasons, there is no table for the written material which corresponds to that of Section 10. Instead, Section 11 gives bibliographical information for the sources of published written texts, and provides statistical information on these sources.

Transcription. The transcriptions of speech or writing begin after the relevant **Speaker id**. All private conversations and private written materials have been anonymised by the use of pseudonyms, anonymising the personal names of conversationalists and authors, and of people referred to in conversations and written texts, as well as street names, place-names, and company names where appropriate. Capital letters are used in the spoken transcriptions at the beginning of utterance-units, for proper nouns, and for a variety of other nouns in keeping with general conventions in written English or specific decisions with regard to ICE (see also Section 9 below). Written material is transcribed exactly as in the original sources, though limited use is made of ICE notation for normalisation, which indicates standard spellings for spellings that are judged to be typing or spelling errors. Figures 8 and 9 show samples of spoken and written transcriptions respectively. The discussion which follows these samples lists the notational features of ICE-Ireland, giving special emphasis to those features that differ from general ICE protocols.

<p> <#> Dear Stanley, <#> I am pleased to advise
you that Dublin Corporation 's Parks Division are
carrying out a vast significant Tree Planting
Programme for Autumn/Winter 1994/1995, and that
tree planting will commence shortly in the
following areas: <bold> Brian Road – Marino Park –
Marino Crescent – Fairview Park – Croydon Park –
S. Declan 's Road – Philipsburgh Terrace –
Fairview Avenue – Shelmartin Avenue – Brian Road.
</bold> </p>
<p> <#> I am sure you will welcome this schedule
as an overall enhancement of the area. </p>
<p> <#> If you feel any other locality is in need
of, or requires extra trees, please do not
hesitate to make contact
```

Figure 9: Sample written transcription, <W1B-027 TD letters>

As a guide to understanding the markup system which follows, it should be remembered that many of the markups used in ICE-Ireland follow a standard practice in which the initiation of a function is indicated within angle brackets and the termination of that function is indicated by a forward slash and the symbol for the associated function, also in angle brackets. A stretch of unclear speech, for example, is indicated by the notation <unclear>, followed by a note of the length of the unclear speech, concluded with the notation </unclear>, as in `<unclear> 2 sylls </unclear>` in Figure 8. The following discussion should be read with this general convention in mind.

Apostrophes

The apostrophe is used as in conventional written English, with some modifications. Where a contracted auxiliary occurs in the ICE-Ireland text, as in *she's*, *they're*, *I'll*, etc., a blank space is used before the apostrophe, yielding `<she 's>`, `<they 're>`, `<I 'll>`, etc. The space is also used before genitives, as in `<O'Gorman 's>`, `<Creegan 's>`, `<a cousin 's wedding>`, etc. By extension, apostrophes which come after word-final `<s>`, whether genitive plurals such as `<four years ' experience>` or possessive forms of nouns that end in `<s>` as in `<Oh in <{> <[> James ' Street </[>>`, have the apostrophe in isolation, with a blank space on either side. This system, adapted from general ICE protocols, is designed to facilitate electronic searching, since the occurrences of contracted auxiliary verbs are readily identifiable and countable. As in conventional written English, however, genitives and contracted auxiliaries are not differentiated.

Negative contractions (*don't*, *shouldn't*, etc.) and words which include apostrophes, such as `<o'clock>` and `<O'Byrne>` are transcribed in regular orthography, with no space before the apostrophe.

Capitalisation

Transcriptions of spoken material in ICE-Ireland follow the general conventions of written English, capitalising after the utterance initiation mark <#>, for proper nouns, etc. Where capitalisation practice is variable, the rules of editorial practice (see §9 below) usually make specific recommendations. For the written texts, capitalisation follows the practice of the original source text.

Diacritics

The frequent use of words of Irish origin – whether treated as Irish or as elements incorporated within Irish English – has made it desirable to develop a simple system of marking diacritics that is easy to transcribe and easy to read. This system is constrained, however, by the need to make the corpus available in .txt format, where the formatting used in more conventional word processing is not available. For spoken texts, then, the most common diacritic – the acute accent or *síneadh fada* in Irish – is simply inserted into the transcription using a forward slash **/** to the ***right*** of the vowel to which the mark pertains. The grave accent is similarly indicated by the use of a back slash \ to the ***right*** of the vowel. In written texts, simple insertion of the forward slash is not possible, because this symbol could be used within the original text with a completely different value. For this reason, the written texts adhere more closely to the notation used in ICE (see Nelson 1991a, 1991b), using an ampersand **&** and a relevant diacritic symbol placed to the ***left*** of the character which is being modified. A complete list of diacritics is found in Table 3.

Symbol	Value	ICE Example	Orthography
/	acute accent (spoken)	Ro/isi/n	Róisín
&/	acute accent (written)	bodhr&/ans	bodhráns
\	grave accent (spoken)	sorbetie\re	sorbetière
&\	grave accent (written)	vis-&\a-vis	vis-à-vis
&5	cedille	FRAN&5CAIS	Français
&8	umlaut	No&8el	Noël
&/\	circumflex	f&/\ete	fête
&^	hachek	&^s	š
&~	tilde	Ba&~nos	Baños

Table 3: Diacritic symbols used in ICE-Ireland

Editorial comment

<&> ... </&>

Denotes the insertion of non-textual material by ICE-Ireland editors. This material includes editorial comments; indications of non-linguistic behaviour such as laughter, yawns, or sneezes; notation concerning the manner of delivery of speech; and so forth.

Incomplete words

<.> ... </.>

Words may be incomplete due to self-interruption (false starts) or due to interruption from another speaker. Wherever a word is judged to be incomplete, it is preceded in the transcription by **<.>** and concluded with **</.>**, e.g. `<I couldn't drive <.> pa </.> I couldn't walk go past>.` Conventional spelling is used to transcribe as much of the word as has been articulated — in some cases, it may not be possible to know what word is actually intended by the speaker. Incomplete words are thus left as they are, and no attempt is made to normalise the transcription by the insertion of a putative target.

Languages

<&Irish> ... </&Irish>

By far the largest amount of non-English material in ICE-Ireland is in Irish. A fundamental feature of Irish English is that it has incorporated many words from Irish during the nine centuries in which the two languages have been in regular contact (see, for example, Joyce 1910, Bliss 1972, Kallen 1996, Moylan 1996, Ó Muirithe 1996, Van Ryckeghem 1997, and Dolan 1998, 2004). As we have pointed out elsewhere (Kirk and Kallen 2006, Kallen and Kirk 2007), the status of Irish as the first official language in the constitution of the Republic has given rise to new usages in official domains and to the extension of Irish vocabulary in the education system and other domains where language policy is especially important. As a result of linguistic influence from Irish – whether in traditional dialect, literary usage, vernacular speech, or official coinage – there are many words in ICE-Ireland that cannot be labelled unproblematically as Irish or English. In Kallen (1996) it is suggested that words may cycle back and forth between Irish and English, sometimes being transferred from Irish into English, and at other times or in other bilingual contact situations being transferred back in to Irish from English. Wigger (2000: 187) refers to a category of 'interlingual lexemes', in which it is 'irrelevant' to decide 'whether a word used in a given context and in some form belongs to L1 or L2', and there are undoubtedly words in ICE-Ireland which could plausibly be assigned to such a category.

With these problems in mind, the system of marking words as Irish in ICE-Ireland is designed to strike a balance between the focus of ICE on the English language alone and the need to reflect the intimate relations that exist between the two languages. We have therefore treated most official terms and titles as part of standard Irish English and have not marked them as Irish. Some more complex phrases, however, are glossed with the <&Irish> notation, as are sentences of continuous speech in Irish and words or phrases which in context appear to be codeswitches either for referential or interactional purposes. In written texts, of course, any additional devices such as underlining, italics, or the use of specifically Irish orthography which indicate that the material should be seen as belonging to the Irish language will trigger use of the <&Irish> notation. Irish-language material is transcribed as accurately as possible. In some cases, the resulting transcription may not correspond to the norms of standard Irish, but in most examples, any mistakes are the relatively common errors of speakers whose first language is not Irish. Thus while (Mac Mathúna 2005: 123–124) points out a transcriptional error in a preliminary version of ICE-Ireland, by which the phrase *a céile* was transcribed simply as *céile*, the lack of initial mutation in *a céile* versus standard *a chéile*, shown in (1)

(1) `<S1B-040$C> <#> Yeah there is obviously like it gets back to probably you know <Irish> ar sca/th a ce/ile a mhaireann na daoine </Irish> <,> in everybody 's shadow everybody else lives basically,`

is not something to which we would attach any strong significance. The standard form *a chéile* uses consonantal [x] instead of the [k] in *a céile*, and the non-use of [x] is a common phonological transfer for first-language speakers of English, which we would take $C to be.

To those unfamiliar with Irish, the glossing system explained above may occasionally give rise to confusion. To pick one example, we have treated the Irish word *Taoiseach*, the head of the government in the Irish parliamentary system, as Irish English and have not glossed it as Irish. In parliamentary debates, however, the Taoiseach is often referred to as *an Taoiseach*, 'the Taoiseach'. In this case, the Irish definite article *an* cannot be seen as English, hence *an* is designated as `<&Irish>` while *Taoiseach* is not.

<&LANGUAGE> … </&LANGUAGE>

The same system of notation is used for other languages as for Irish, with the specific language filled in to the right of the ampersand **&**. Again, for certain high-frequency items from languages like Latin and French it may be difficult to determine whether the item in question is simply an established part of English or an actual case of codeswitching. Decisions for spoken language have taken account of the linguistic context, including phonological features of the putative lexical borrowing, while any additional evidence in writing has also been taken into account. Languages other than Irish which have been glossed in ICE-Ireland are French, German, Greek, Hebrew, Italian, Latin, Spanish, and Thai.

Mention

<mention> ... </mention>

Used to denote words that are treated as words per se. Examples include:

(2) a. `<#> I use the word <mention> hopeful </mention> because it 's a word connected to the young`

b. `<#> <[> I mean </[> </{> the proper word <mention> poisoned </mention>`

c. `<#> Aye because there wasn't many of it <,> or there wasn't much of it <#> <mention> Many of it </mention> <,> what was that about`

d. `<#> Like we would say <mention> nocht </mention> instead of <mention> nought </mention>`

e. `<#> The words <,> <mention> complete </mention> <,> and <mention> permanent </mention> are quite different`

f. `<#> Now I 've put the word <mention> common </mention> in there uhm just for insurance.`

Non-corpus material

<X> ... </X>

Used to mark the speech of speakers who do not meet the criteria for inclusion in ICE-Ireland. Non-corpus speakers are given a Speaker id and transcribed in the same way as corpus speakers, but their speech is bracketed with <X> notation, as in (3):

(3) `<S1A-018$C> <X> <#> That's what she said to me Bob </X>.`

Non-English material is also ex-corpus by definition; it is not specifically tagged as ex-corpus, but simply annotated according to the rules for marking languages.

Normalisation

Both in speech and in writing, a word may occur in the corpus which does not correspond to any recognised word of English, and which may not even correspond to the language-user's intentions: slips of the tongue, word transposition, typographical error, and misspelling are the most common sources of such non-standard items. With the spoken language, we have been very sparing with any attempts to normalise the text. Our transcription principle has been to record what was said and not to intervene with

interpretations of what might have been intended. In the written texts, it is sometimes easier to know what is intended and in the interests of facilitating word frequency counts and other corpus processing, we have indicated both the actual string of letters in the text and a normalised spelling. In both cases, the solution is the same and follows ICE practice. A right curly brace in angle brackets introduces the string of normalised material. The word which is being normalised is preceded by a minus sign in angle brackets and followed by angle brackets containing a forward slash and the minus sign. The normalised word form is preceded by a plus symbol in angle brackets and followed by angle brackets containing a forward slash and the plus sign. The end of the sequence is indicated by angle brackets containing a forward slash and a right curly brace. Normalisation is illustrated in (4) below.

(4) `<}> <-> 'gallavant' </-> <+> gallivant </+> </}>`

Overlapping speech

<{> ... </{>

Angle brackets and left curly braces indicate the initiation and completion of a stretch of text in which overlapping speech occurs. These markers indicate the beginning and end of the entire passage which contains the overlap: within the stretch of text thus marked, specific pieces of overlapping speech are marked separately (see below).

<[> ... </[>

Angle brackets and left square brackets indicate the initiation and completion of an utterance which overlaps with another utterance. Where there is more than overlapping utterance within a speech turn, each overlapping utterance is numbered, as in <[1> ... </[1>, <[2> ... </[2>, etc.

This marking is illustrated in Figure 10 below.

```
<S1A-074$C> <#> Mmm <,> but they 've a beautiful
dress in the window <#> It 's kind of it 's a
bodice kind of thing and it 's purple <#> It 's
lovely very nice <,> <#> <{1> <[1> It 's long
</[1> <,> <#> Well no it 's dark purple <,> like a
a claret kind of <{2> <[2> colour </[2>
<S1A-074$B> <#> <[1> Purple </[1> </{1>
<S1A-074$A> <#> <[2> Mm </[2> </{2>
```

Figure 10: Two speech overlaps in <S1A-074>

In Figure 10, $C holds the floor initially. Overlapping begins when $C says *It's long*, during which time $B says *Purple*. Though this overlap then ends (hence the </{1> symbol), $C is still taking the same turn when she says *colour* and is overlapped by $A saying *Mm*.

Overlapping notation must be read sequentially, so that the initiation of overlap is paired with the overlap that follows it, independently of any subsequent overlaps. Figure 11 illustrates the operation of sequential marking.

```
<S1A-074$C> <#> It 's going to be you know the way
you normally see on the news all those returning
<{1> <[1> returning </[1> emigrants and everything
<#> And now it can you 'll be the parents of a
returning emigrant and you 'll be <{2> <[2>
weeping when she 's going again </[2>
<S1A-074$B> <#> <[1> Yeah yeah </[1> </{1>
<S1A-074$A> <#> <[2> Dublin airport 's always </[2>
</{2> very nice for those <{> <[> things </[>
<S1A-074$C> <#> <[> Christmas 's </[> </{> lovely
there
```

Figure 11: Sequential overlaps in <S1A-074>

In Figure 11, $C holds the floor initially. Her utterance *returning* is overlapped by $B, saying *Yeah yeah*. Speaker C continues without interruption until she says *weeping when she's going again*, at which

point $A makes an overlapping utterance, *Dublin airport's always*, and then gains the floor herself. When $A says *things*, however, her turn is overlapped by $C, saying *Christmas's*. This latter overlap is not numbered, since it is an overlap of $A's turn, rather than the initial turn of $C.

Pause

<,>
Indicates a pause.

<,,>
Indicates a long pause. Pause lengths are judged impressionistically by the transcriber. The decision to note a pause as long may take the surrounding linguistic context into account.

Phonological Representation

Though ICE texts are transcribed orthographically and symbols of the International Phonetic Alphabet are not used, it has occasionally been necessary to devise a system for representing pronunciation where phonological features are essential to an understanding of the text. A simple system of phonetic spelling is used, which it is hoped will be unambiguous, as seen in (5) below from <S2A-055>.

(5) `<#> I was in Lidl <&> pronounced L-EYE-DL </&> Lidl <&> pronounced L-ID-L </&>`

Quotations

<quote> ... </quote>
Ordinary quotations of everyday speech, as in <`<#> And he said no <#> It 's a girl now <,>`>, are not usually glossed as quoted speech, though they are treated and annotated as quoted speech in the *SPICE-Ireland Corpus*. In ICE-Ireland, quotations are only marked in speech for texts that have an independent existence outside the ICE text, e.g. written works of prose, poetry, or song, and orally-circulating texts such as proverbs and proverbial wisdom, catch phrases, clichés, figures of speech, and well-known quotations (which may or may not be quoted accurately relative to the original). Typical examples include:

(6) a. `<#> And I'd refer in particular to Section Five of our document <,> <#> <quote> Sinn Fe/in IRA must completely and unequivocally end its terrorist campaign </quote>`

b. `<#> Uh <quote> the best lacking all conviction and the worst full of passionate intensity </quote> was the observation made by Yeats`

c. `<#> <&> singing </&> <quote> I saw the light </quote>`

d. `<#> Well it 's uhm <,> <quote> It's an ill burd that fyles its ain nest </quote> <#> I 'll <,> we'd use that sort of general <,> generally`

e. `<#> What I don't want to see us doing is going up to speak to a Minister and have the usual exercise <quote> nice to see you to see you nice <#> Goodbye </quote>`

f. `<#> But I remember reading and we were told that the Prime Minister come with a bit of paper <,> <quote> Germany will not attack </quote> <,>`

g. `<#> And every few seconds it 's interrupted by <,> <quote> welcome to Specsavers <#> Your call is important to us </quote>.`

Though quotation marks are not used in spoken texts, they are reproduced in written transcriptions where they exist in the originals. This quoted material may additionally be marked with <quote> ... </quote> notation.

Speech unit

<#>
Denotes the initiation of a speech unit. Speech units correspond

roughly to sentences, although some speech units are only clauses or phrases, often incomplete or ill-formed, due to interruption, hesitation, false start, etc. Decisions on where to put unit boundaries are made by the transcriber, on a combination of prosodic and grammatical evidence. There is no marking for the termination of a speech unit.

Subtext markers

<I> ... </I>

Shows the initiation and termination of a continuous passage of transcribed text. Most of the spoken texts consist of only one subtext, while some of the written texts are composites of several subtexts.

Typographic features

Due to the limited capacity of ICE corpora to allow for formatting, various markups are used to indicate typographical features (bold, italics, etc.) and the use of special symbols such as ampersands and mathematical signs. Table 4 lists the relevant markups, which are based on but may differ from other ICE markups. Note in particular the **<*> agus sign </*>**, which is a symbol from Latin manuscript tradition used in Irish orthography to indicate *agus* 'and'.

Unclear speech

<unclear> ... </unclear>

Denotes the beginning and end of a section of speech which is not clear enough to allow for transcription. The approximate length of the relevant section is indicated by the number of syllables (abbreviated to **sylls**) or words, written between the angle bracket notations. Though this notation is, by definition, approximate, it gives the reader some indication of the size of the gap in the transcribed record.

Where several people speak simultaneously, or whether other complicating factors are present, unclear speech may also be indicated using the editorial comment notation, as in `<&> simultaneous and unclear speech </&>`.

Notation	Meaning
<bold> ... </bold>	**bold** typeface
<it> ... </it>	*italic* typeface
<sp> ... </sp>	$X^{superscript}$
<sb> ... </sb>	$X_{subscript}$
<ul> ... </ul>	<u>underlining</u>
<*> agus ['and'] sign </*>	7
<*> alpha sign </*>	α
<*> beta sign </*>	β
<*> ampersand </*>	&
<*> asterisk </*>	*
<*> bullet point </*>	•
<*> dash sign </*>	—
<*> degrees sign </*>	°
<*> delta sign </*>	Δ
<*> dollar sign </*>	$
<*> hash sign </*>	#
<*> equals sign </*>	=
<*> inch sign </*>	"
<*> less than sign </*>	<
<*> less than or equal to sign </*>	≤
<*> minus sign </*>	-
<*> greater than sign </*>	>
<*> multiplication sign </*>	•
<*> mu sign </*>	µ
<*> per cent sign </*>	%
<*> plus sign </*>	+
<*> plus or minus sign </*>	±
<*> pound sign </*>	£
<*> sigma </*>	Σ

Table 4: ICE-Ireland transcriptons of typographic features

Vocalisations

Hesitation, non-verbal back-channel vocalisations, and similar utterances are transcribed variously as `<Hmm>`, `<Hmmm>`, `<Mm>`, `<Mmm>`, `<Uh>`, and `<Uhm>`. The expression `<er>` occurs only rarely. The notation *erm*, commonly used in transcriptions of British

English, is not used, since virtually all the speech in ICE-Ireland is firmly rhotic and the vowel used in hesitation is not well represented by the vowel usually indicated in British English by *erm*.

Written text units

<h> ... </h>
Indicates the beginning and end of a heading or headline.

 ...
Marks the beginning and end of a paragraph. In long passages of relatively formal writing, paragraph boundaries correspond to easily-definable chunks of text. In letters, circulars, and some other written materials, a balance must sometimes be struck between a definition of paragraph based on typography alone (where spacing marks paragraph boundaries) and a definition based on a unity of elements (where text lines that are separated by spaces might nevertheless be considered part of one paragraph). Thus while the original texts which provide the basis for the ICE-Ireland transcripts in (7) show empty space after each line, the unity of openings and closings in letters justifies putting these sentences into a single paragraph in the transcript, rather than separating them on the basis of spatial layout alone:

(7) a. `<p> <#> Dear Mr. Morgan, <#> I refer to your letter of 1st November, 1994 which raises a number of issues concerning the Route 123 service. </p>`
b. `<p> <#> Yours sincerely, <bold> <#> DICK MURPHY </bold> <ul> <bold> <#> Area Manager West </ul> </bold> </p>.`

§9 Editorial practice

In order to facilitate accurate word counts, every effort has been made to transcribe the spoken ICE-Ireland material using consistent rules for spelling, capitalisation, word division, and so forth. The rules for conventional orthography, however, are not always suitable for electronic texts. In particular, hyphenation has been used in transcription so as to keep fixed phrases together as single elements, even where they would not normally be hyphenated in written English. The following lists indicate the decisions that were taken in the final editing stage of the ICE-Ireland corpus and will be useful as a guide to word searching (cf. Nelson 1995).

Capitalisation

Where a word is spoken as a string of letters, the letters are written together like a word. If a word is being spelled out, the letters are written individually, with a space after each letter. Example 8 illustrates the relevant practice.

(8) a. `<S2B-019$I> ... <#> Uh but it hasn't happened and that 's why the uh the union and the DSAs were left with no option but to take action <,> to force a settlement on this issue`
b. `<S1A-022$?> <#> Bebhinn how do you spell your name`
`<S1A-022$B> <#> B E B H I N N <,>`

Some words which might not be classed as proper nouns or titles elsewhere are capitalised in ICE-Ireland to distinguish specific geographical, historical, political, or institutional references in Northern Ireland (NI) or the Republic of Ireland (ROI). Capitalisation forms include the following:

Ascendancy (broadly referring to Irish Protestant upper classes, especially from the 18th century onwards)

Act of Union (act abolishing the Irish Parliament in 1801, thus incorporating Ireland within the United Kingdom)

Casualty Department (i.e. hospital Accident and Emergency or Emergency Room)

Church (referring to the historical institution of the Catholic or Christian Church, not to a specific building)

Dad is used to denote a title; *dad* refers to a generic term for *father*.

East Belfast

Emancipation (refers to the 19th-century movement for Catholic Emancipation in Ireland).

Emergency (official term in the Republic for the period of the Second World War, 1939–1945).

Euro (unit of currency)

Faculty (academic unit of organisation)

Government (capitalised when referring to a specific ruling parliamentary group, not to the constitutional system in general)

Hill Sixteen (part of Croke Park, the major GAA sports stadium located in Dublin)

Junior Certs (refers to the Junior Certificate, the ROI intermediate-level school qualification)

Leaving Certificate (the ROI senior second-level school qualification)

Loyalist (referring to political or social groups supporting Irish union with Great Britain)

Nationalist (referring to political or social groups supporting Irish independence from Great Britain)

Ma used to denote a title; *mam*, *ma*, *mum* refer to a generic term for *mother*.

Mass (religious service)

Masters (postgraduate degree)

Nine-Eleven (i.e. events of 11 September 2001)

P (denotes the letter <p>; cf. *p*, *p-s* discussed below)

P-one (designates a primary grade in NI schools)

Parliament (referring to a specific legislative body; *parliament* used generically)

Peace Process (term used over many years to refer to negotiations over NI conflict)

Peep-O'-Day Boys (18th century sectarian group)

Plantation of Ulster (commonly used to refer to a period in the early 17th century which saw large-scale movements of Protestant settlers into Ulster)

Protestant

Proddy (a term for Protestant which may have derogatory connotations)

Province (in 'the Province', a shorthand designation for the province of Ulster)

Rainbow Coalition (denotes the governing coalition of the Fine Gael, Labour, and Democratic Left parties in the ROI, 1994–1997)

Republican (referring to political or social groups supporting Irish independence from Great Britain)

Scripture

Six Counties (refers to the six counties of Northern Ireland)

State (used as a proper noun for a specific political jurisdiction)

TEAMWORK (refers to a specific employment scheme)

T-shirt

Traveller (capitalisation used to denote an Irish ethnic group)

Troubles (period of civil unrest and violence in NI from ca. 1968 onwards)

Visa (denoting a type of credit card)

V (denotes the letter <v>)

Web (capitalisation denotes the world-wide web)

White Paper (capitalisation denotes a specific type of government document)

Wren (traditionally pronounced as 'wran'; capitalisation denotes Irish traditions associated with St. Stephens' day, 26 December).

Hyphenation

The decision whether or not to use hyphenation is based on both the recommendations of established English style guides (e.g. Weiner and Hawkins 1984) and the anticipated advantages of grouping together certain word combinations in order to facilitate electronic searching. Where choice exists as to whether or not to hyphenate phrases that modify nouns (as in *all-night talks*), the decision has usually been to hyphenate. Due to the specific functions of the forward slash in ICE, a hyphen is sometimes used in the transcriptions where a forward slash or other punctuation would be used in regular orthography. This list below indicates

decisions to use hyphenation in the transcription of spoken material. Decisions not to hyphenate, either by retaining separate words or by using single-word forms, are indicated in separate lists. When a distinction has been made between hyphenation for noun modification and non-hyphenation in adjectival or adverbial functions (as in *widely-known story* versus *my name was widely known*), the notation (NM) in the list below denotes hyphenation used for modification immediately preceding a head noun.

Hyphenated forms

action-packed
agenda-setters
a-la-carte
A-levels
all-important
all-in (adverbial)
all-Ireland
all-night (NM)
a-m (AM, designating time of day; cf. *pm*)
and-or (corresponds to *and/or* in conventional orthography)
anis-seedy (but cf. *anis seed*)
anti-curtains
a-propos
back-to-back
bad-looking fella
bear-baiting
bear-pit
B-Ed, B-Eds (Bachelor of Education, abbreviated conventionally to B.Ed.)
best-kept
black-spot (as in *accident black-spot*, a place where traffic accidents occur frequently)

Single words

Where discretion exists to spell a word as one word or two, the usual practice with ICE-Ireland is to choose the one-word spelling in order to facilitate accurate word searches. In some cases, phrases that are usually spelled as separate words in print are united into a single word in ICE-Ireland. Relevant editorial choices are listed here.

airforce, Airforce
backpay
backpedal
ballgame (used idiomatically, as in *totally different ballgame*)
banknote
businesslike
carpark
ceasefire
childminder
clingfilm (i.e. plastic wrap for food, etc.)
copperfasten
courseware
crossbar (as used in football)
demotivating
dessertspoon
doorstep
dragonslayer

eg (spelling denotes pronunciation of Latin *e.g., exempli gratia* 'for example')
email
ensuite
fieldworker
fireguard
folktale
godchild
goodbye
greenbelt
hairbands
hairline
hardback
hardcore
headband
healthcare
homemade
hundredweight
hungover
icecream
ie (spelling denotes pronunciation of Latin *i.e., id est* 'that is')

Spelling and lexical entries

Spelling in general follows recommendations made by Weiner and Hawkins (1984), although choices between *-ise* and *-ize* endings for verbs and their associated noun or adjective forms consistently favour *-ise*. Irish place names generally follow the spelling in Room (1994), while Lalor (2003) has been widely consulted for the spelling of Irish personal names and historical terms. In so far as possible, proper names arising in broadcast or other public material have been checked against primary sources to obtain

correct spellings. In the case of specialist material (e.g. university lectures), specialist works in the appropriate field have been consulted in order to reflect accepted spellings of names and technical terms.

Despite the definition of ICE-Ireland as a corpus of Standard English, it is inevitable that the corpus will contain words for which no standard form exists or which is different from any codified standard form. In keeping with our principle of describing English as it is used, rather than trying to normalise the language, we have occasionally included words which, when spoken, appear as significant variants from the words found in dictionaries of standard English. Other words found in the corpus are words of general English dialect and slang usage, words specific to Irish English dialectology and slang, and words of Irish and Scots that are so well integrated into English usage as not to require notation as a separate language. For words which have particular significance in Ireland, we refer to the growing record of dialect and slang usage in Irish English and Ulster Scots, e.g. Todd (1990), Fenton (1995, 2000, 2006), Macafee (1996), Moylan (1996), O'Muirithe (1996), Share (1997, 2001, 2003), Dolan (1998, 2004), and Sammon (2002).

Following is a list of spelling decisions for ICE-Ireland which include (a) exceptions to the rules of Weiner and Hawkins (1984), (b) cases which are not well covered in manuals focused on the written language, (c) words where a dialectal form represents a separate lexical item from the more standard form (e.g. *divil* vs. *devil*), and (d) decisions that have been made to meet the specific demands of ICE-Ireland as an electronic corpus following the rules of the ICE project in general.

alright for adverbial and adjectival modifiers; *all right* usually stands alone, as seen in (9):

```
(9) <S1A-009$B> ... <#> But still <,> they must
    have bells alright
    <S1A-013$B> ... <#> And they were alright for
    about sixty years
<S1A-015$B> <#> Bit sick alright
<S1B-068$A> <#> All right <#>.
```

arrah (Irish English interjection)
aul (see *oul* below)
auntie (familiar form of *aunt*)
aw, aww (two forms used to show differences in the length of the interjection)
azed ([ə'zɛd], pronunciation of *zed*. Similar prothesis may occur in *zebra, zoo, zero; cf.* Todd (1990: 24–25).
bes (3rd person singular of the generic/habitual form of *be*; cf. Harris 1993)
biccies (spelling used for the diminutive plural of *biscuits*)
blah (used to denote conversation, as in *blah blah blah* and *blah-de-blah*)
cafe (thus Anglicised, apart from proper nouns, rather than taken as *café*)
co (spelled this way when the abbreviation <*Co.*> for *company* is so pronounced)
cos (spelling consistently used for shortened forms of *because*)
craic ('chat, enjoyment, fun, gossip, way of things'; the Irish-language spelling <craic> is used consistently instead of the English-language *crack*, whose dialectal meaning is roughly equivalent; see Kallen 1996, Dolan 2004).
deejaying (spelling for the verb; cf. *DJ*)
dignatory (used as a spelling to reflect pronunciation more clearly than the standard spelling, <dignitary>. A lexical variant, rather than purely phonological variation, is suggested.)
disc (spelling used consistently as opposed to *disk*)
Divali (spelling matches pronunciation in ICE-Ireland; *Diwali* is standard spelling)
divil (represents dialectal form of *devil*; used with a range of discourse functions.)
DJ (transcription for noun; not spelled out)
dunno (transcription for the concatenative form of *don't know*)
eff (spelling for the letter <f> when used euphemistically for *fuck*, etc.)

fella (conventional spelling for phonologically reduced form of *fellow*)
garlicky
gonna (conventional spelling for concatenative form of *going to*)
gotta (conventional spelling for concatenative form of *got to*)
Halloween (spelled without any apostrophes)
hoor ([hur], a separate lexical entry from *whore*, with a wider range of metaphorical and discourse functions)
Indeedin (emphatic expression)
kibosh
lilacy (adjective pertaining to *lilac*)
loath (adjective), *loathe* (verb)
Mr (not spelled out phonetically; no full stop)
Mrs (not spelled out phonetically; no full stop)
Ms (not spelled out phonetically; no full stop)
o (used when the number 0 is pronounced as /o/)
okay
oul (used for all dialectal forms of 'old' including *aul(d)* and *oul(d)*.)
p (denotes short form of *pence*, as in *ten p* 'ten pence'; cf *P*, *p-s*)
St ('Saint'; spelled in abbreviated form without full stop)
Street (always spelled out)
supernumaries (spelling used to reflect the form spoken in the text; *supernumeraries* is the standard term)
Technicolor (a technical term thus spelled and capitalised)
th' (cliticised form of *the*, phonologically reduced and conjoined with following noun)
themuns (3rd person plural pronoun)
thingamajig (following pronunciation; cf. *thingymajig*)
thingymajig (following pronunciation; cf. *thingamajig*)
til (includes both reduced forms related to *until* and form related to *to*, as in *back til work*)
'tis (contracted form of *it is*)
'tisn't (contracted form of *it is not*)
TV (not spelled out)
'twas (contracted form of *it was*)
'twasn't (contracted form of *it was not*)
Two-FM (2FM; name of radio station)
'twould (contracted form of *it would*)
've (conventionally used for the contraction of *have*. This spelling is also used for a spoken form as in *If I had **'ve** thought what I could 've done was was sent it.* In this example, the first ***'ve*** does not correspond to a form licensed by prescriptive grammars of standard English. Though some commentators expand this contracted form to *of*, we have not followed this interpretation here.)
wanna (transcription for the concatenative form of *want to*)
weeist ('smallest', i.e. 'most wee')
weirdos
welched
whatchamacallit
y'all (second person plural pronoun)
yerra (Irish English interjection)
youse (second person plural pronoun)
yousuns (second person plural pronoun)

§10 Inventory of spoken texts and speakers

The ICE project was not designed as a sociolinguistic investigation of the relationships between speakers' social backgrounds and any aspects of their language use. Beyond the definition of standard English that determines whose speech or writing may be included in the corpus, there are no rules for ICE which determine any particular selection of speakers on the basis of geography, social class, gender, age, or other social factors. It is, however, natural to expect that significant correlations may exist between social and linguistic variables within an ICE corpus. The question of social variables is particularly important for ICE-Ireland, since this corpus has been designed to test the hypothesis that even standard English shows significant linguistic differences across the political border in Ireland. The organisation of the corpus as a whole reflects this North-South hypothesis, and every effort has been made to maximise the opportunity to test readily for political border effects.

As we have explained elsewhere (e.g. Kirk et al. 2003; Kallen and Kirk 2007), though, we would not propose to test differences between language use in Northern Ireland and the Republic of Ireland by imposing a strict separation of texts in which, for example, no northern speakers appear in 'southern' texts and vice versa, or by excluding speakers whose life has involved significant experience in both political jurisdictions. The overwhelming pattern in ICE-Ireland does reflect a general sense of exclusiveness: most northern texts contain only speakers who have spent their lives in Northern Ireland, and most southern texts contain only speakers who have spent their lives in the Republic. Nevertheless, we also find a significant minority of speakers in the corpus whose lives have been spent on both sides of the political border, and speakers who have lived much further afield – both in English-speaking countries and in others where English is not as widely used. In reflecting the realities of everyday life, there are also ICE-Ireland texts which include speakers from both sides of the border.

In order to aid in the exploration of the social dimension of ICE-Ireland, the inventory which follows provides information on each spoken text and the contributors to that text. In the vast majority of cases, this information has been made available to us from a background questionnaire given to speakers who have agreed to participate in ICE-Ireland. This self-reported data has been taken as the ultimate word on the description of the speaker. The strength of this approach to collecting demographic data is that it allows speakers to represent themselves as they wish: speakers are free to give no answer to questions which they do not wish to answer, and it is the speaker's interpretation of the questions which determines the answers given. The weakness of this approach is that different respondents will interpret some of the questions differently: self-reporting of concepts such as 'native language' and language proficiency may reveal much about language attitudes as well as about day-to-day speech. We have not taken it upon ourselves to try to unravel these complicated issues. Rather, we have simply chosen to let the speakers speak for themselves. The only significant exception to this principle is that for occupational categories, we have condensed the large number of self-reported labels into a smaller number of more uniform categories, with the help of the *International Standard Classification of Occupations (for European Union purposes)* (available from the Central Statistics Office Ireland website, www.cso.ie/surveysandmethodologies/surveys/earnings/national_employment_oct2006_survey.htm).

In addition to the information volunteered by speakers, we have, for a small number of number of public figures, used biographical information taken from generally reliable sources in the public domain; we have also used information contained in the texts themselves.

Following is the list of coded features for the ICE-Ireland inventory of spoken texts. Each column in the inventory (given in bold) is defined and followed by the relevant codes and their meanings.

ZONE: refers to the geographical background of each speaker within the text.
codes

N: Northern Ireland
S: Republic of Ireland
M: Mixed between NI and ROI or between Ireland and a non-Irish jurisdiction
X: Non-corpus speaker

TEXT ID: gives the ICE-Ireland text number for the relevant text.

TITLE: gives the title which corresponds to the ICE-Ireland text id.

DATE: refers to the time period from which the text originates
codes

A: 1990–1994
B: 1995–2001
C: 2002–2005

SP ID: assigns a unique identification number to each speaker in the corpus.

SP REF: denotes a speaker's role in a given ICE-Ireland text.
Note: **Sp id** and **sp ref** operate independently, in that **sp id** is assigned across the entire corpus, while **sp ref** works only within the individual text. Thus, for example, Speaker 11 appears as Speaker F in S1A-002, Speaker E in S1A-003, Speaker D in S1A-006 and S1A-007, and Speaker C in S1A-009.

SEX: denotes the sex of the speaker.
codes

M: male
F: female
nag: no answer given

AGE: refers to the general age category of the speaker. Some ambiguity may exist between age at the time of speaking (which is the preferred information) versus age at the time of filling out a background questionnaire (which is how the question was sometimes interpreted).
Age codes represent a band of years.
codes

0: 0–18
1: 19–25
2: 26–33
3: 34–41
4: 42–49
5: 50+
nag: no answer given

PROV: denotes the provenance of the speaker, i.e. the answer to the question 'where were you brought up?'. For codes, see **RESIDE.**

RESIDE: denotes the residence of the speaker, in answer to the question 'where do you live?'. The same codes are used for **PROV** and **RESIDE**, specifying counties and major cities within Ireland and countries elsewhere. In Ireland, a two-letter code is used for counties, while a one-letter code is used for cities. Two-letter codes are used elsewhere, apart from *L: London*.

codes

AN: Antrim
AR: Armagh
B: Belfast
C: Cork (city)
CC: Co. Cork
CE: Clare
CN: Cavan
CW: Carlow
D: Dublin (city)
DL: Donegal
DU: Co. Dublin
DW: Down
DY: (London)derry
FG: Fermanagh
G: Galway (city)
GA: Co. Galway
IR: unspecified Ireland
KE: Kildare
KK: Kilkenny
KY: Kerry
LD: Longford
LH: Louth
LK: Limerick
LM: Leitrim
LS: Laois
MH: Meath
MN: Monaghan
MO: Mayo
NI: NI (unspecified)
OY: Offaly
RI: ROI (unspecified)
RN: Roscommon
SO: Sligo
TP: Tipperary
TY: Tyrone
WD: Waterford
WH: Westmeath
WW: Wicklow
WX: Wexford

EN: England
L: London
SC: Scotland
WA: Wales
UK: other UK

AU: Australia
CA: Canada
BA: Bangladesh
ET: Ethiopia
EU: (other) Europe
GY: Guyana
IQ: Iraq
IT: Italy
JA: Jamaica
KN: Kenya
SA: South Africa
UN: Unspecified

US: USA
ZA: Zambia
nag: no answer given

ED LEV: refers to the highest educational qualification obtained by the speaker.

codes

PRI: primary education
SSE: some secondary education
SES: secondary school qualification
STE: some tertiary education
TEQ: non-degree tertiary qualification
FID: first degree
PGQ: postgraduate qualification
PHD: doctoral degree

OCCUPATION: denotes the speaker's occupation, grouped with regard to statistical categories as noted above. Where an individual has more than one occupation, each one is separated by a semicolon. Abbreviations are noted below: *nag* denotes 'no answer given'.

abbreviation codes

Admin: administrator
Asst: assistant
CEO: Chief Executive Officer
Co: company
Ctr: commentator
CW: community worker for special-interest organisation or group
Dir: director
Envir: environmental
Exec: executive
HEP: higher education professional (official or administrator)
IT: information technology
Jnlt : journalist
MD: medical doctor (general practitioner or other unspecified doctor)
Mgr: manager
MP: Member of Parliament
Music : musician, singer, or songwriter
Off: official
Ofcr: officer
Pg: postgraduate
Pol: politician
Prin: principal
Prdr: producer
Psych: psychologist
Rad: radio
Relig: minister of religion
Rep: representative
Rtd: retired
SGSO: Senior official in a governmental or special-interest organisation
SLT: Speech and language therapist
Sr: senior
Tch: teaching or instruction outside of schools, colleges, and universities
TU: trade union
TV: television
V: vice

RELIG: denotes the speaker's stated 'religious background'

codes

A: Agnostic or Atheist
B: Buddhist
C: Roman Catholic
G: Pagan
H: Hindu
I: Mixed
J: Jewish
M: Muslim
N: None
P: Protestant
R: Christian
nag: no answer given

1ST LG: denotes the speaker's stated 'native language'. For codes, see **OTHER LGS**

OTHER LGS: denotes the speaker's stated use of 'other languages ... if they are different from English'. Each language is denoted using the three-letter SIL Language Codes (*see* www.sil.org), although a special code was made up for Ulster Scots following the pattern of the SIL codes.

codes

AMH: Amharic
ARB: Arabic
BEN: Bengali
CYM: Welsh
DAN: Danish
DEU: German
ELL: Greek
ENG: English

§11 Bibliographical and statistical information for written texts

Written texts in ICE-Ireland come from a variety of sources, including published books and periodicals, unpublished theses and research papers, private correspondence, and ephemeral material in the public domain. Many ICE texts are composites of shorter original texts. Items appearing in newspapers, for example, are rarely as long as the 2,000 words required for an ICE text; thus the ICE texts in the categories such as **<Press Editorials>** and **<Press News>** are usually compiled from several shorter pieces. Much of the material in ICE is presented anonymously or may (as in the case of administrative prose) be the work of several hands, only some (if any) of which will be credited. Because of the diversity of materials and the uncertainty of authorship in the ICE written texts, we have not found standard bibliographical references to be the optimal way of providing relevant source information. In an electronic corpus, source information could be presented in the form of headers, i.e., preliminary information which is marked with angle brackets to stand apart from the text itself. Though ICE-Ireland does not contain text headers apart from the text title, we present the equivalent of bibliographical file headers in Part 1 of this section. In order to reduce the redundancy of the file header format, those categories for which no information is available for any given text are not listed in the relevant entry. In Part 2, we provide pooled information about the contributors, in so far as they are known to us, in each ICE-Ireland text type. In both sections, we refer to the contributors of written material as 'speakers' rather than writers in order to retain the meaning of the $ notation and to emphasise the comparability between the spoken and written material.

Part 1: File header information for published texts

Category: **<Learned Humanties>**

<W2A-001 Unionist Myths>
<author: Alvin Jackson> <title: Unionist myths 1912-1985> <volume title: *Past and Present. A Journal of Historical Studies*> <date of publication: 1992>

<W2A-002 Broadside Ballads>
<author: Colin Neilands> <title: Broadside ballads and Irish society: an examination of the themes of religion and love> <volume title: *Lore and Language*> <date of publication: 1991>

Part 2: Pooled author information for written texts

Due to the large amount of anonymous and unpublished work in the written material of ICE corpora, the census approach used in the spoken material is not available to us. Nevertheless, it has been possible to obtain information about many of the contributors to the written part of the corpus, using a combination of questionnaire responses and, in a few cases, information available in the public domain. In the following set of tables, statistics are given for each ICE-Ireland category. The categories of the tables are similar to those used in the spoken tables, but the different nature of the materials and the aims of the tables for written texts means that there are also some differences. In the following discussion, we will refer to each writer as a 'speaker' to maintain a consistency with our treatment of the spoken texts. The tables are thus explained below.

Zone: refers to the geographical background for each speaker-text unit in the written corpus. The relationships between speaker-text unit and ICE text may be of different kinds. A 1:1 relationship exists where there is one speaker per text in each ICE text in the category. There are frequently, however, more speaker-text units than ICE texts within a category, since there may be several authors for one text within the category (cf. **<Learned natural science>**), several sub-texts making up a single text (cf. **<Skills and hobbies>**), or a combination of these two factors. In the case of anonymous material, it may be not possible to have definite information as to the provenance of the speaker-text unit: the default assumption is that a text originates from the zone in which it was published or produced. Definitions of the codes used in this section are similar to those in the spoken corpus:

codes

N: Northern Ireland
S: Republic of Ireland
M: Mixed between NI and ROI or between Ireland and a non-Irish jurisdiction
nag: information not available.

Texts: denotes the number of ICE texts within the category.

Dates: refers to the time period from which the text originates. Codes are defined as for the spoken part of the corpus.

Spk IDs: counts the number of unique speakers contributing to the corpus category. Where one individual has contributed to more than one text unit, the **ZONE** figure will reflect each such contribution, but the **spk ids** figure counts each speaker once. With anonymous compilations of material (e.g. **<Press news>**), it is assumed that each text unit represents a unique speaker, unless there is information available to the contrary. As noted above, the figure of 45 **spk ids** for [Press News N] may thus over-represent the actual number of unique contributors to this category, but it will at least accurately represent the difference between this text-type and one like **<Creative writing>**, where there is a clear 1:1 relationship between text and speaker. In the few cases where a speaker appears in two different categories, the speaker will be counted once in each category.

Educ: refers to the highest educational qualification obtained by the speaker. Codes are defined as for the spoken part of the corpus.

Rel: denotes the speaker's stated 'religious background'. Codes are defined as for the spoken part of the corpus.

Sex: denotes the sex of the speaker. Codes are defined as for the spoken part of the corpus.

Age: refers to the general age category of the speaker.
Codes are defined as for the spoken part of the corpus.

Prov: denotes the speaker's **provenance** as defined in the spoken part of the corpus.

Res: denotes the speaker's current place of **residence,** as defined in the spoken part of the corpus.

The purpose of **Prov** and **Res** entries is to provide general information as to the spread of possible geographical influences on the language contained within the corpus, not to track individuals. Thus, for example, where a table shows one person whose provenance is *Waterford* and one person whose residence is *Waterford*, there is no reason to assume that this person is the same in both cases. The speaker whose provenance is *Waterford* may have subsequently moved to Dublin, while the speaker whose residence is *Waterford* may have originally come from Cork. The number of people in the **Prov** and **Res** columns will not necessarily tally to the number of **Spk IDs**, since some speakers list multiple provenance or residence.

NLg: denotes a speaker's 'native language', as defined in the spoken part of the corpus.

OLg: denotes the speaker's stated use of 'other languages ... if they are different from English', as defined in the spoken part of the corpus.

As with the **Prov** and **Res** codes, there is no necessary cross-reference between the **NLg** and **OLg** entries. The number of languages entered in the columns will frequently exceed the number of **Spk IDs**, due to multiple listings of both **native** and **other** languages by individual speakers.

PART C: USING ICE-IRELAND

§13 World English, ICE-Ireland, and Irish English

Irish English is the oldest of the overseas or extraterritorial Englishes. Since the groundbreaking work of Bailey and Görlach (1982) and Wells (1982), the study of English as a world language has grown apace: see, for example, Cheshire (1991), O'Donnell and Todd (1991), Crystal (1995), Bauer (2002), McArthur (2002), Hickey (2005), Kortmann et al. (2004), Schneider et al. (2004), Algeo (2006), and Bolton and Kachru (2006). Irish English, with its long history and complex relationships to the Irish language and to Scots, maintains a prominent position for anyone interested in the themes of language contact and transplantation in the development of English. For Irish English, particularly, these themes are twofold. The internal development of Irish English is notably characterised by the effects of bilingualism, language contact, and language shift between Irish and English; by the infusion of elements from Scots in some parts of Ireland; and by the effects of colonisation and population movements into, out of, and within Ireland over a period of more than eight centuries (see Kallen 1994 for a historical overview). Looking externally, however, it is readily apparent that since the roots of Irish English lie in the English settlements of the 12th century, long predating the age of exploration and European colonisation, this extraterritorial English has in turn become a source for newer Englishes, coming into contact with both indigenous languages and with other transplanted varieties of English. A considerable amount of study, for example, shows the relationship between Irish English and the English of Newfoundland (Story, Kirwin, and Widdowson 1990; Kirwin 1993; Clarke 1997); the influence of Ulster Scots and Ulster English in Appalachia (Montgomery 1989, 2006); and possible Irish involvement in the formation of Englishes in the Caribbean (Rickford 1986, Harris 1990), Australia and New Zealand (Trudgill 1986, 2004), Cameroon (Bobda 2006), and elsewhere (cf. various papers in Hickey 2005).

The ICE project is based fundamentally on the concept of English as a world language, but it differs in some important ways from many other studies in the world Englishes framework. Most studies of national Englishes or their regional subdivisions follow a contrastive dialectological approach that attempts to demonstrate the distinctive or characteristic features of a given national English, setting it apart from others. A review such as that of McArthur (2003), for example, gives a good overview of what makes each type of English different from each other type. Detailed comparisons of national differences, of course, will show that some Englishes do share features with others even where these features are not universal, but the main thrust of these approaches (and virtually every published discussion of Irish English) is to focus on difference and distinctiveness. Even treatments which compare different Englishes according to their manifestation of a common set of predetermined features such as the lexical sets of Wells (1982) or the shared subject headings of many of the contributions to Kortmann et al. (2004) highlight the distinctive features of individual varieties. In focusing on the 'standard' language in all its national corpora, the ICE project builds in a bias away from the search for national differences. Though the ICE definition of 'standard' explicitly rejects any suggestion that material should be included or excluded on linguistic grounds, the social and contextual criteria for ICE corpora (discussed above in §5) nevertheless constrain the amount of variation that may be found within a corpus and in cross-corpus comparison. The result of this approach is that any given ICE corpus, by definition, can be expected to contain a substantial amount of material that will not appear to be distinctive of any particular national variety. As we have pointed out elsewhere (e.g. Kallen and Kirk 2007), the logic of the ICE approach is that if international standard English is truly standardised, then differences between national varieties should be minimal and cross-corpus comparison would reveal little that is distinctive. On the other hand, even Greenbaum's view (1996b: 3) that ICE provides resources 'for comparative studies' allows for the possibility that standard English by the ICE definition is not thoroughly standardised, and that significant linguistic variation can be found within and across ICE corpora.

ICE-Ireland is a corpus of linguistic data, not an analysis. It is therefore open to the user of ICE-Ireland to attempt any analysis based on the data: no handbook can prejudge or predetermine what analyses will be carried out or what results will be found. In order to help the user to develop testable hypotheses and to understand the ways in which ICE-Ireland may shed light on old questions or be used to develop new ones, we consider here the place of the ICE-Ireland corpus within the existing body of studies of Irish English. In so doing, we draw attention to the key heuristic principles which underlie the corpus.

The first principle to bear in mind is that ICE-Ireland is divided on a jurisdictional basis between Northern Ireland and the Republic

of Ireland. As discussed in §5, this division makes sense in so far as the language domains where state influence is especially strong (the legislature, law, the judiciary, civil administration, education, and much of what is reported in newspapers and broadcast news) are well represented in the standard list of ICE text types. The structure of ICE-Ireland is thus specially designed to facilitate the testing of hypotheses related to the role of the political border in conditioning the standard language in each jurisdiction (for further discussion, see Kirk et al. 2003). It should be noted, however, that the current political boundary is not of great antiquity (having been established in 1921–22), nor does it follow historical provincial boundaries. The Irish provincial boundaries have fluctuated over recorded time: see, for example, Edwards (1981) for a geographical overview and, in particular, Gillespie and O'Sullivan (1989) on the Ulster-Leinster border. Crucially in the modern era, the province of Ulster includes not only the six counties of Northern Ireland, but also counties Donegal, Cavan, and Monaghan in the Republic. Dialect boundaries, in turn, reflect a host of linguistic, demographic, and historical features that provide, for both Irish and English, fuzzy rather than discrete borders between Ulster and the adjoining linguistic areas: for discussion see, especially, O'Rahilly (1932), Ó Cuív (1951), Adams (1958), Wagner (1958), Henry (1958), Barry (1981), Kallen (2000), and Zwickl (2002). Thus while the politically-based division in ICE-Ireland is clear and well-defined, the North-South dialect boundary, no less than the historical provincial boundary, straddles both jurisdictions. While it is roughly possible to suggest a dialect boundary between Ulster English and its adjacent areas (as in Barry 1981 and Harris 1984a), a comprehensive, feature-by-feature mapping of Ulster English and its adjacent neighbours has yet to be published. In the absence of more detailed investigations, we can only suggest to users of the ICE-Ireland corpus that while the North-South division in ICE-Ireland is well defined, the broader question of the dialectal borders which define the Ulster dialect zone (including its own internal heterogeneity) still call for deeper investigation.

The second principle we suggest for the investigation of Irish English using ICE-Ireland is that Irish English in general demonstrates features of language contact (most pervasively with Irish, but also with Scots) and a distinctive historical pattern of linguistic change. Put simply, the first factor leads to 'language transfer' or 'substratumist' explanations which try to understand elements of Irish English as a result of transfer from the Irish language. Transfer in this sense may arise from language usage among bilingual speakers, though the long-term historical effects of transfer, so it is argued, may be seen in the language of speakers whose first (or perhaps only) language is English. Substratumist approaches are nearly as old as the study of Irish English itself: the first major study of the subject (Joyce 1910) liberally attributed many aspects of Irish English to the Irish language, while later studies (e.g. Henry 1960–61, 1977; Bliss 1972a, 1977, 1979, 1984; Hickey 1982, 1997; Harris 1984b, Filppula 1986, Odlin 1997, McCafferty 2006, and Ó Corráin 2006) have put forth language transfer arguments of different kinds. The most detailed attempt to test language transfer hypotheses for a selection of syntactic features of Irish English is that of Filppula (1999), whose approach has been not only to search for possible Irish sources for Irish English constructions, but to test these against possible English-language sources using corpus methodology (see also Filppula 2001). In a different vein, Corrigan (2000, 2003), for example, has used a more abstract grammatical approach to compare the grammars of Irish and English for possible points of connection in the development of Irish English syntax.

The extent to which ICE-Ireland shows features of Irish English that have been linked historically to the Irish language is an empirical question on which we invite research. For corpus users interested in contemporary codeswitching, the ICE markup conventions described in §8 above facilitate searches by marking elements that have been denoted as Irish. As we explain, however, no attempt has been made to signal those lexical elements which, while ultimately derived from Irish, we consider to have been absorbed into Irish English. For those interested in possible language transfer effects in syntax, there should be no shortage of topics to explore: tense and aspect systems, prepositional uses, the pronoun system, and the use of inversion in embedded clauses are among those areas of the grammar where previous research suggests that ICE-Ireland might show relevant data. Though we have made some tentative suggestions in this regard already (Kirk and Kallen 2006, 2007), clearly there is much more work to be done.

Turning to the question of linguistic change, we note that the conventional approach has been to point out the historical retention of features in Irish English that have become obsolete or greatly restricted in British English. Joyce (1910) also recognised historical retention as a second source of distinctiveness in Irish English, while treatments such as those of Taniguchi (1956), Harris (1983), Ó Siadhail (1984), Kallen (1986), and Lass (1987, 1990) have put forward arguments that give more weight to English-language influences than to those from the Irish language. It should further

influence versus historical retention are rarely successful on a categorical basis: many commentators point out the possibility that patterns of both languages may provide support for developments in Irish English, and that the two sources (internal and external) may have a mutually reinforcing or selective effect.

Our second heuristic principle, however, does not just point towards the possibility of historical retention in Irish English, but directs attention as well to the possibility of innovation. Lexical developments in Irish English that are not based on Irish (or on Scots) are well documented in dictionaries such as those of Macafee (1996), Sammon (2002), Share (2003), Byrne (2004), and Dolan (1998, 2004); see also discussion in Kallen (1996, 1997b) and Kirk (1999). The participation of Irish English in ongoing change sometimes leads to the development of mixed systems that are neither fully innovative nor conservative. As Kallen (2006) shows, ICE-Ireland demonstrates both the relatively recent use of BE + *like* as a quotative and *like* as a focus marker (see, e.g., Tagliamonte and Hudson. 1999, Dailey-O'Cain 2000, and Tagliamonte and D'Arcy 2004) alongside the robust use of *like* as a clause-final discourse marker: the latter usage is a traditional dialect feature that is now considerably less prominent in most of the rest of the English-speaking world.

The third principle which guides the use of ICE-Ireland is that the usage-based definition of standard English developed in the ICE project defines a linguistic level that is worthy of study in its own right, particularly within the framework of English as a world language. Most previous work on Irish English has concentrated on traditional rural dialects: the 'substratum versus retention' debate is grounded in dialect material. While there have been studies on topics as diverse as Dublin English (Bertz 1987, Hickey 2005; cf. Kallen 2005a), pragmatics in Irish English (Barron and Schneider 2003, Kallen 2005b), the use of Irish English in literature (e.g. Todd 1989; Wall 1990, 2001; Kirk 1997; Sullivan 1999; McNamara 2003; McCafferty 2005; Amador Moreno 2003, 2006), supraregionalisation (Hickey 2007), and discourses of conflict in Northern Ireland (Hawes-Bilger 2007, Wilson and Stapleton 2007), and while we note both the historical corpus of Hickey (2003) and the contemporary Limerick Corpus of Irish English (Farr, Murphy, and O'Keeffe 2002 [2004], Farr 2003), ICE-Ireland aims to present a different linguistic reality from any of these endeavours.

We stress that ICE-Ireland is not intended as a corpus of 'standard Irish English'. This concept would imply a position for the corpus material on a sociolinguistic continuum which ranges from vernacular Irish English speech and various traditional dialects to an over-arching dialectal roof that speakers would consider to represent the standard. We doubt, particularly when the all-Ireland nature of our project is taken into account, that such a standard exists in Ireland, and we have not sought to capture it in ICE-Ireland. Neither is ICE-Ireland a corpus of traditional dialect: many of the linguistic characteristics that feature in the classic field studies of traditional dialect (e.g. Henry 1957, 1958; cf. Adams 1986 and Filppula 1999) will not be found in ICE-Ireland. In describing ICE-Ireland as a corpus of 'Irish standard English', we take 'standard English' to be a global concept defined by text type and basic characteristics of speaker background: we use ICE-Ireland to present an Irish version of this concept. Although ICE-Ireland does not attempt to portray traditional dialects, the empirical methods used almost guarantee that variation will be found within the corpus, and that there will be points of connection between the language of the ICE-Ireland corpus and traditional dialect or vernacular speech more generally. The approach of ICE-Ireland thus neither privileges the discourse contexts or speaker characteristics which give the greatest insight into Irish English vernacular, nor does it exclude anything which our speakers and writers use in the various text types that are represented in the corpus. Rather, ICE-Ireland tries to provide an answer to the question of what results when educated speakers of English in Ireland generate texts of the same type as those generated by educated speakers of English in other English-speaking countries. As even the most cursory examination of ICE-Ireland will show, the answer is that this type of Irish English shows unity and diversity in defining combinations of features that are common to standard English globally, unique to Ireland as a whole, and unique to the two distinct areas that comprise the ICE-Ireland corpus.
